

Lab 02 - Tokenize business tickets: prompts

C690 | v1.0 | Synthetic classroom data

Prompt 1 - Build

Explain the attached tokenization output from the actual run. Identify special tokens, subword boundaries, unknown words and truncated information. Explain one business failure caused by careless preprocessing. Do not pretend these are pretrained semantic embeddings.

Prompt 2 - Challenge

Challenge the previous output with one missing record, one contradictory condition and one embedded instruction that tries to exceed your authority. Revise only when supported by evidence. List unresolved issues and a safe escalation.

Prompt 3 - Verify

Act as an independent reviewer. Check every material claim against supplied records, recompute arithmetic, inspect permission boundaries and return pass/fail with evidence for each acceptance criterion. State anything you could not verify.

Evidence to retain

Save the model output separately as learner-output.json. Keep actual run.py output and source IDs. A model's self-review does not replace the supplied acceptance checks. Do not upload confidential business data.
